Public Domain. 12. FREE DOWNLOAD. 23.1. Field of the Invention The present invention relates to a viscoelastic material and a method of manufacturing the same. More specifically, the present invention relates to a viscoelastic material which can be suitably used as a material for a facsimile sheet, a writing pad, a note pad or the like in a note-taking service, a portable telephone, an electronic calculator, an electronic game or the like, and a method of manufacturing the same. 2. Related Background Art In accordance with the recent spread of computers, office automation and the like, there are increasing demands for inexpensive and excellent note-taking materials. In addition, a great demand is made for facsimile materials having excellent heat-resistances.

Moreover, a great demand is also made for lightweight portable phones which are remarkably reduced in thicknesses of housings. However, in order to provide a conventional note-taking material with heat-resistances, a thickness of the material needs to be increased. In addition, in order to provide a portable phone with a thinner housing, the note-taking material used therein needs to be reduced in thickness. Further, in order to provide note-taking materials with heat-resistances, it is necessary to use a material which is excellent in heat-resistances even at a temperature over 200.degree. C., and accordingly, there is demanded a note-taking material which is excellent in heat-resistances at the temperature over 200.degree. C. On the other hand, since notebook type memory sheets have been in common use, there have been proposed various improvements in such notebook type memory sheets. As for these notebook-type memory sheets, there have been known a heat-sensitive recording paper which is capable of recording letters and/or figures in a simple manner, and a writing/notepad which is extremely resistant to 3da54e8ca3
